

Where Research Meets Reels

Executive Summary · Investor Vision · Early-Stage / MVP · 2026

WHAT WE'RE BUILDING

ResearchReel turns dense academic papers into short, captioned video reels — paired with an AI chat that lets readers ask questions directly to the paper — inside a social feed and network built specifically for students, researchers, and faculty.

The Problem

Great research gets lost in dense PDFs nobody has time to read, and discovery is broken — strong work is buried in feeds nobody scrolls far enough to find.

The Solution

Short, AI-generated video reels with built-in Q&A make papers fast to watch and easy to question — inside a real academic community.

MARKET OPPORTUNITY

269M+

higher-ed students worldwide (UNESCO, 2024)

8.8M+

professional researchers worldwide (UNESCO)

\$400B+

global EdTech market, still expanding

Figures are directional industry estimates — refine TAM/SAM/SOM with primary research before fundraising.

Who We Serve

Students, researchers, and professors — all three already exist in the same academic network, connected through the same papers.

Business Model

Early focus on advertising and sponsored content: in-feed sponsored reels, institutional partnerships, and promoted discovery placements.

WHERE WE ARE & WHAT WE'RE EXPLORING

MVP built — core upload, reel generation, AI chat, and feed work end to end. We don't have a fixed funding ask yet; at this stage we're most interested in strategic guidance, pilot introductions to universities and research communities, and right-fit early-stage capital once traction is clearer.

Built on a cloud-native microservices architecture (Kubernetes, AI/RAG pipeline) designed to scale to 1M+ users.
